

Alde AquaClear UV-C

Help yourself with clean and safe water

Even if you refilling your water tank from a water tap at any stop on your trip, that doesn't mean the water is clean. On the contrary, the water can be harmful and contaminated, without you noticing. Boiling the water is not enough to remove any pesticides and other hazardous chemicals. In addition, it can have poor taste and smell.

The solution is water purification. Alde AquaClear UV-C is an effective water treatment that protects both your own and your fellow passengers' health in a lenient and environmentally friendly way. It gives you an extra safety guard and removes unwanted viruses and bacteria, both those you can get when you cook with the water or when showering and washing.

Together with Alde AquaClear UV-C, a carbon filter is also included to ensure that you have an odorless water without bad taste or color.

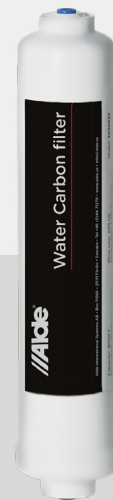

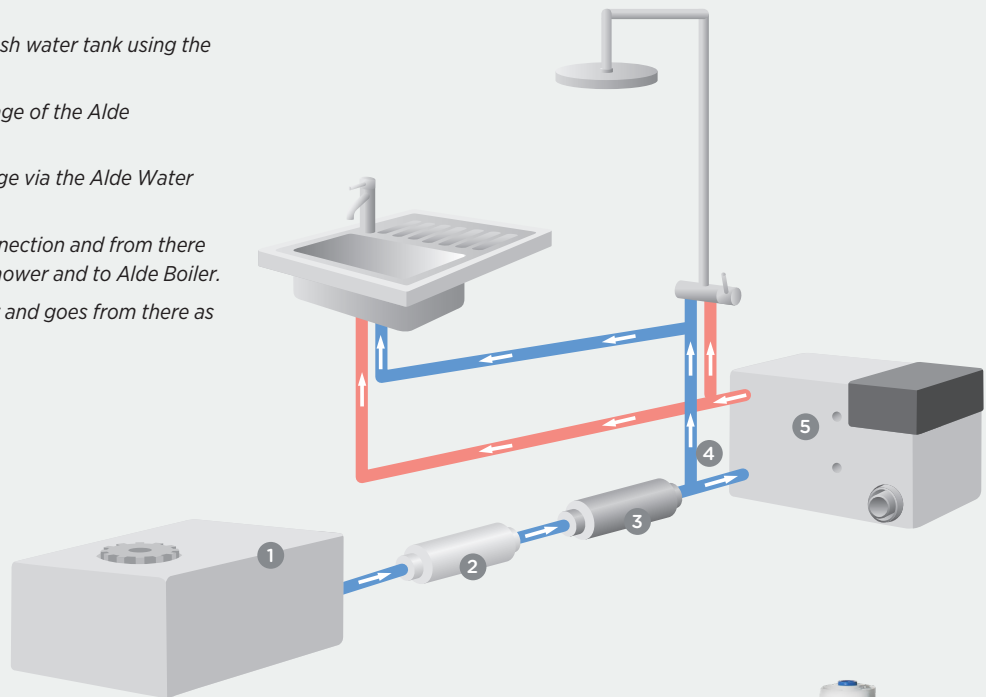

Alde AquaClear UV-C

Alde AquaClear UV-C cleverly disinfects water in the immediate vicinity of the tap site, using UVC light generated from LEDs.

How it works

1. Cold water is pumped from the fresh water tank using the fresh water pump.
2. The water is purified in the first stage of the Alde AquaClear UV-C unit.
3. The water is purified in second stage via the Alde Water Carbon filter.
4. Then the water goes on to a T-connection and from there as cold water to the kitchen and shower and to Alde Boiler.
5. Cold water is heated in Alde Boiler and goes from there as hot water to kitchen and shower.

ADVANTAGES WITH ALDE AQUACLEAR UV-C

- Protects your health and is good for the environment.
- Reduces unwanted contaminants such as legionella, viruses and protozoa via UVC light.
- Completely free of chemicals and mercury.
- Carbon filters maximize chlorine reduction, bad taste and bad odour.
- Low energy consumption – active only when water is flowed through.
- Compact solution, integrated into Alde Heating System with simple plug & play installation*.

* Only applies for Alde Compact 3030

The product also contains a carbon filter that maximizes chlorine reduction, bad taste, color and odor.

How to get Alde AquaClear UV-C installed

- As an option when buying a new motorhome, talk to your caravan/motorhome salesman.
- For after-installation to your existing Alde Heating System, contact your nearest Alde Dealer or Alde Service Point. Contact details can be found on our website alde.se.
